# Values for Partition Function Form Games 

David Housman<br>Goshen College<br>July 2008 (a work in progress)

## Preview

- Coalition versus partition games and values
- Values
- Weighted marginal sum values
- Dispersion values
- Apex values
- Summary values
- Properties
- Efficient, symmetric, dummy, and linear
- Monotone
- Dummy independence

## Games

## Definition (Coalition Game)

Players $N$ and a real-valued
function $w$ on $\mathcal{C}=$ $\{S: \varnothing \neq S \subseteq N\}$.

| Example |  |
| :---: | :---: |
| $S$ | $w(S)$ |
| $A B C$ | 24 |
| $A B$ | 18 |
| $A C$ | 18 |
| $B C$ | 18 |
| $A$ | 12 |
| $B$ | 0 |
| $C$ | 0 |

## Games

## Definition (Partition Game)

## Definition (Coalition Game)

Players $N$ and a real-valued function $w$ on $\mathcal{C}=$ $\{S: \varnothing \neq S \subseteq N\}$.

| Example |  |
| :---: | :---: |
| $S$ | $w(S)$ |
| $A B C$ | 24 |
| $A B$ | 18 |
| $A C$ | 18 |
| $B C$ | 18 |
| A | 12 |
| B | 0 |
| C | 0 |

## Example

| $S ; P$ | $w(S ; P)$ |
| :---: | :---: |
| $A B C ; \varnothing$ | 24 |
| $A B ; C$ | 18 |
| $A C ; B$ | 18 |
| $B C ; A$ | 18 |
| $A ; B, C$ | 12 |
| $B ; A, C$ | 6 |
| $C ; B, C$ | 0 |
| $A ; B C$ | 0 |
| $B ; A C$ | 0 |
| $C ; A B$ | 0 |

## Shapley Values

Symmetric Weighted Sum of Marginals

For 3-player coalition games:

$$
\begin{array}{rll}
\phi_{A}(w) & =c(0) & (w(A B C)-w(B C)) \\
& +c(1) & (w(A B)-w(B)) \\
& +c(1) & (w(A C)-w(C)) \\
& +c(2) & w(A)
\end{array}
$$

## Shapley Values

Symmetric Weighted Sum of Marginals

For 3-player coalition games:

$$
\begin{array}{rll}
\phi_{A}(w) & =c(0) & (w(A B C)-w(B C)) \\
& +c(1) & (w(A B)-w(B)) \\
& +c(1) & (w(A C)-w(C)) \\
& +c(2) & w(A)
\end{array}
$$

For 3-player partition games

$$
\begin{aligned}
\phi_{A}(w) & =c(\varnothing ; 0) & (w(A B C ; \varnothing)-w(B C ; A)) \\
& +c(1 ; 1) & (w(A B ; C)-w(B ; A C)) \\
& +c(1 ; 0) & (w(A B ; C)-w(B ; A, C)) \\
+ & c(1 ; 1) & (w(A C ; B)-w(C ; A B)) \\
& +c(1 ; 0) & (w(A C ; B)-w(C ; A, B)) \\
& +c(2) & w(A ; B C) \\
& +c(1,1) & w(A ; B, C)
\end{aligned}
$$

## Shapley Values

Efficient and Symmetric Weighted Sum of Marginals

For 3-player coalition games:

$$
\begin{aligned}
\phi_{A}(w) & =\frac{1}{3} \quad(w(A B C)-w(B C)) \\
& +\frac{1}{6}(w(A B)-w(B)) \\
& +\frac{1}{6}(w(A C)-w(C)) \\
& +\frac{1}{3} \quad w(A)
\end{aligned}
$$

## Shapley Values

## Efficient and Symmetric Weighted Sum of Marginals

For 3-player coalition games:

$$
\begin{aligned}
\phi_{A}(w) & =\frac{1}{3} \quad(w(A B C)-w(B C)) \\
& +\frac{1}{6} \quad(w(A B)-w(B)) \\
& +\frac{1}{6}(w(A C)-w(C)) \\
& +\frac{1}{3} \quad w(A)
\end{aligned}
$$

For 3-player partition games

$$
\begin{array}{rrrl}
\phi_{A}(w) & = & \frac{1}{3} & (w(A B C ; \varnothing)-w(B C ; A)) \\
+ & c(1 ; 1) & (w(A B ; C)-w(B ; A C)) \\
+ & \left(\frac{1}{6}-c(1 ; 1)\right) & (w(A B ; C)-w(B ; A, C)) \\
+ & c(1 ; 1) & (w(A C ; B)-w(C ; A B)) \\
+ & \left(\frac{1}{6}-c(1 ; 1)\right) & (w(A C ; B)-w(C ; A, B)) \\
+ & 2 c(1 ; 1) & w(A ; B C) \\
+ & \left(\frac{1}{3}-2 c(1 ; 1)\right) & w(A ; B, C)
\end{array}
$$

## Shapley Values

## Efficient and Symmetric Weighted Sum of Marginals

For 3-player coalition games:

$$
\begin{aligned}
\phi_{A}(w) & =\frac{1}{3} \quad(w(A B C)-w(B C)) \\
& +\frac{1}{6}(w(A B)-w(B)) \\
& +\frac{1}{6}(w(A C)-w(C)) \\
& +\frac{1}{3} \quad w(A)
\end{aligned}
$$

For 3-player partition games

$$
\begin{array}{rlrl}
\phi_{A}(w) & = & \frac{1}{3} & (w(A B C ; \varnothing)-w(B C ; A)) \\
& + & c(1 ; 1) & (w(A B ; C)-w(B ; A C)) \\
& + & \left(\frac{1}{6}-c(1 ; 1)\right) & (w(A B ; C)-w(B ; A, C)) \\
+ & c(1 ; 1) & (w(A C ; B)-w(C ; A B)) \\
& + & \left(\frac{1}{6}-c(1 ; 1)\right) & (w(A C ; B)-w(C ; A, B)) \\
& + & 2 c(1 ; 1) & w(A ; B C) \\
& + & \left(\frac{1}{3}-2 c(1 ; 1)\right) & w(A ; B, C) \\
c(1 ; 1)=\phi_{A}(w) \text { if } w(A B C ; \varnothing)=w(B C ; A)=w(A B ; C)=1 .
\end{array}
$$

## Shapley Values

For 5-player partition games

$$
\begin{aligned}
& \phi_{A}(w)=\frac{1}{5} \quad(w(A B C D E ; \varnothing)-w(B C D E ; A)) \\
& +\quad c(1 ; 1) \quad(w(A B C D ; E)-w(B C D ; A E)) \\
& +\quad c(2 ; 2) \quad(w(A B C ; D E)-w(B C ; A D E)) \\
& + \\
& \text {... } \\
& +\quad c(3 ; 3) \quad(w(A B ; C D E)-w(B ; A C D E)) \\
& +\quad c(2,1 ; 2) \quad(w(A B ; C D, E)-w(B ; A C D, E)) \\
& +\quad c(2,1 ; 1) \quad(w(A B ; C D, E)-w(B ; C D, A E)) \\
& +c(1,1,1 ; 1) \quad(w(A B ; C, D, E)-w(B ; A C, D, E))
\end{aligned}
$$

In 3, 4, and 5 player games, there are 1, 3, and 7 parameters.

## Shapley Values

Efficient and Symmetric Weighted Sum of Marginals

For coalition games:

$$
\mathrm{SH}_{i}(w)=\sum_{S \in \mathcal{C}_{n}: i \in S} \frac{(|S|-1)!(n-|S|)!}{n!}(w(S)-w(S \backslash\{i\}))
$$

## Shapley Values

## Efficient and Symmetric Weighted Sum of Marginals

For coalition games:

$$
\mathrm{SH}_{i}(w)=\sum_{S \in \mathcal{\mathcal { C } _ { n }}: i \in S} \frac{(|S|-1)!(n-|S|)!}{n!}(w(S)-w(S \backslash\{i\}))
$$

For partition games

$$
\begin{aligned}
\phi_{i}^{c}(w)= & \sum_{(S ; P)} \sum_{R \in P \cup\{\varnothing\}} c_{n}(\|P\| ;|R|)(w(S ; P)-w(S \backslash\{i\} ; P[i, R])) \\
& +\sum_{P \in \mathcal{P}(N \backslash\{i\})} c_{n}(\|P\|) w(\{i\} ; P)
\end{aligned}
$$

where the first sum is over embedded coalitions $(S ; P)$ satisfying $i \in S$ and $|S| \geq 2, c_{n}(p ; r) \in \mathbb{R}$ for all $p \in \mathcal{P}^{*}(n-2)$ and $r \in p$ are parameters, and the other coefficients are defined in terms of the parameters.

## Axiomatic Characterizations

Efficient $\sum_{i \in N} \phi_{i}(w)=w(N ; \varnothing)$.
Symmetric Relabeling players relabels the payoffs.
Dummy If a player cannot unilaterally change the worth of an (embedded) coalition, then that player receives a zero payoff.
Linear $\phi\left(a_{1} w^{1}+a_{2} w^{2}\right)=a_{1} \phi\left(w^{1}\right)+a_{2} \phi\left(w^{2}\right)$.

## Axiomatic Characterizations

Efficient $\sum_{i \in N} \phi_{i}(w)=w(N ; \varnothing)$.
Symmetric Relabeling players relabels the payoffs.
Dummy If a player cannot unilaterally change the worth of an (embedded) coalition, then that player receives a zero payoff.
Linear $\phi\left(a_{1} w^{1}+a_{2} w^{2}\right)=a_{1} \phi\left(w^{1}\right)+a_{2} \phi\left(w^{2}\right)$.

## Theorem (Shapley, 1953)

The Shapley coalition value is the unique efficient, symmetric, dummy, and linear coalition value.

## Axiomatic Characterizations

Efficient $\sum_{i \in N} \phi_{i}(w)=w(N ; \varnothing)$.
Symmetric Relabeling players relabels the payoffs.
Dummy If a player cannot unilaterally change the worth of an (embedded) coalition, then that player receives a zero payoff.
Linear $\phi\left(a_{1} w^{1}+a_{2} w^{2}\right)=a_{1} \phi\left(w^{1}\right)+a_{2} \phi\left(w^{2}\right)$.

## Theorem (Shapley, 1953)

The Shapley coalition value is the unique efficient, symmetric, dummy, and linear coalition value.

## Theorem (McCaulley, 1990; Merki, 1991; Theoharidis, 1993)

The Shapley partition values are the only efficient, symmetric, dummy, and linear partition values.

## Efficient, Symmetric, Dummy, and Linear Coalition Value

| $S$ | $w(S)=$ | $w^{1}(S)$ | $+w^{2}(S)$ | $+w^{3}(S)$ | $+w^{4}(S)$ | $-w^{5}(S)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $A B C$ | 24 | 12 | 18 | 6 | 6 | 18 |
| $A B$ | 18 | 12 | 0 | 0 | 6 | 0 |
| $A C$ | 18 | 12 | 0 | 6 | 0 | 0 |

$$
d_{i}^{T ; Q}(S ; P)=1 \text { if }(T \backslash\{i\} ; Q[i, R]) \precsim(S ; P) \text { for some } R \in Q \cup\{\varnothing\}
$$

- Myerson (1977) proved there is a unique additive, symmetric, and carrier value. Carrier is redundant on partition competitive games.

## Dispersion Process

## Dispersion Process

For coalition games:
$A B C$

## Dispersion Process

For coalition games:
$A B C \quad \underset{1 / 3}{\Longrightarrow} \quad B C$

## Dispersion Process

For coalition games:
$A B C$
$\underset{1 / 3}{\overrightarrow{ }}$
$B C \quad \underset{1 / 2}{\Longrightarrow}$
C

## Dispersion Process

For coalition games:
$A B C$
$\underset{1 / 3}{\overrightarrow{ }}$
$B C$

$C \Longrightarrow \varnothing$

## Dispersion Process

For coalition games:

| $A B C$ | $B C \quad \Longrightarrow \quad \Longrightarrow$ | $C$ |
| :--- | :--- | :--- |
| $w(A B C)-w(B C)$ | $w(B C)-w(C)$ <br> to $B$ | $w(C)$ <br> to $A$ |

## Dispersion Process

For coalition games:

| $A B C \quad \overrightarrow{1 / 3}$ | $B C \quad \underset{1 / 2}{ }$ | $C \quad \underset{1}{ }$ |
| :---: | :---: | :---: |
| $w(A B C)-w(B C)$ | $w(B C)-w(C)$ | $w(C)$ |
| to $A$ | to $B$ | to $C$ |

For partition games:

| $A B C ; \varnothing \quad \underset{1 / 3}{\longrightarrow}$ | $B C ; A \quad \underset{\frac{1}{2} a(1 ; 1)}{\longrightarrow}$ | $C ; A B \quad \Longrightarrow$ |
| :---: | :---: | :---: |
| $\begin{aligned} & w(A B C ; \varnothing)-w(B C ; A) \\ & \text { to } A \end{aligned}$ | $\begin{aligned} & w(B C ; A)-w(C ; A B) \\ & \text { to } B \end{aligned}$ | $\begin{aligned} & w(C ; A B) \\ & \text { to } C \end{aligned}$ |

+ & \frac{1}{3} \frac{1}{2} a(1 ; 0) & (w(A C ; B)-w(C ; A, B)) \\
+ & 2 \frac{1}{3} \frac{1}{2} a(1 ; 1) & w(A ; B C) \\
& + & 2 \frac{1}{3} \frac{1}{2} a(1 ; 0) & w(A ; B, C)
\end{array}
$$

$$
\begin{array}{ll}
\phi_{A}^{12}(w) & \phi_{A}^{1,2}(w) \\
\quad= & \frac{1}{3}(w(A B C ; \varnothing)-w(B C ; A))
\end{array} \quad=\frac{1}{3}(w(A B C ; \varnothing)-w(B C ; A))
$$

## Main Characterization

## Theorem (Housman, 1996)

Suppose $\phi$ is a value on a convex cone $\Gamma$ containing dummy games. The following statements are equivalent:
(1) $\phi$ is a Shapley value.
(2) $\phi$ is a dispersion value.
(3) $\phi$ is an affine combination of apex values.

- $\phi$ is efficient, symmetric, dummy, and linear on $\Gamma$.

## Second Characterization

Monotone $\phi_{i}(v) \leq \phi_{i}(w)$ whenever $i \in N$ and $v, w \in \Gamma_{n}$ satisfy

$$
v(S ; P) \leq w(S ; P) \text { if } i \in S \text { and } v(S ; P) \geq w(S ; P) \text { if } i \notin S .
$$

## Second Characterization

Monotone $\phi_{i}(v) \leq \phi_{i}(w)$ whenever $i \in N$ and $v, w \in \Gamma_{n}$ satisfy

$$
v(S ; P) \leq w(S ; P) \text { if } i \in S \text { and } v(S ; P) \geq w(S ; P) \text { if } i \notin S .
$$

## Theorem (Housman, 1996)

Suppose $\phi$ is a value on a convex cone $\Gamma$ containing dummy games and having a nonempty interior. The following statements are equivalent:
(1) $\phi$ is a Shapley value with nonnegative coefficients.
(3) $\phi$ is a dispersion value with nonnegative parameters.
(0) $\phi$ is a convex combination of apex values.
(0) $\phi$ is efficient, symmetric, dummy, linear, and monotone on $\Gamma$.

## Different Numbers of Players

| $S ; P$ | $w(S ; P)$ |
| :--- | :---: |
| $A B C ; \varnothing$ | 1 |
| $A B ; C$ | 1 |
| $A C ; B$ | 1 |
| $A ; B, C$ | 1 |

$A ; B, C \quad 1$

| $i$ | $\phi_{i}(w)$ |
| :---: | :---: |
| $A$ | $1-2 \alpha$ |
| $B$ | $\alpha$ |
| $C$ | $\alpha$ |
| $\alpha=$ | $c_{3}(1 ; 1)$ |

## Different Numbers of Players

| $S ; P$ | $w(S ; P)$ | $S ; P$ | $w^{D}(S ; P)$ |
| :---: | :---: | :---: | :---: |
| $A B C ; \varnothing$ | 1 | $A B C D ; \varnothing$ | 1 |
|  |  | $A B C ; D$ | 1 |
| $A B ; C$ | 1 | $A B D ; C$ | 1 |
|  |  | $A B ; C, D$ | 1 |

|  |  | $A B ; C D$ | 1 |
| $A C ; B$ | 1 | $A C D ; B$ | 1 |
|  |  | $A C ; B, D$ | 1 |
|  |  | $A C ; B D$ | 1 |
| $A ; B, C$ | 1 | $A D ; B, C$ | 1 |
|  |  | $A ; B, C, D$ | 1 |
|  |  | $A ; B, C D$ | 1 |
|  |  | $A ; B D, C$ | 1 |
| i | $\phi_{i}(w)$ | i | $\phi_{i}\left(w^{D}\right)$ |
| A | $1-2 \alpha$ | A | $1-2 \beta$ |
| $B$ | $\alpha$ | $B$ | $\beta$ |
| C | $\alpha$ | C | $\beta$ |
| $\alpha=c_{3}$ | (1; 1) | D | 0 |

The efficient, symmetric, dummy, and linear properties provide no relationship between the parameters $c_{n}$ and $c_{n+1}$.

The dummy extension of the partition game $(N, w)$ is the partition game $\left(N \cup\{d\}, w^{d}\right)$ defined by $w^{d}(S ; P)=$ $w(S \backslash\{d\} ;\{R \backslash\{d\}: R \in P\} \backslash\{\varnothing\}$ for all embedded coalitions ( $S ; P$ ) of $N \cup\{d\}$.

## Summary Values

Given a partition game $w$, define a summary coalition game $w^{b}$ by

$$
w^{b}(S)=\sum_{P \in \mathcal{P}(N \backslash S)} b(\|P\|) w(S ; P)
$$

where

$$
b(\varnothing)=1
$$

## Summary Values

Given a partition game $w$, define a summary coalition game $w^{b}$ by

$$
w^{b}(S)=\sum_{P \in \mathcal{P}(N \backslash S)} b(\|P\|) w(S ; P)
$$

where

$$
b(\varnothing)=1 .
$$

Define the summary value $\phi^{b}$ by

$$
\phi^{b}(w)=\operatorname{SH}\left(w^{b}\right) .
$$

## Summary Values

Given a partition game $w$, define a summary coalition game $w^{b}$ by

$$
w^{b}(S)=\sum_{P \in \mathcal{P}(N \backslash S)} b(\|P\|) w(S ; P)
$$

where

$$
b(\varnothing)=1 .
$$

Define the summary value $\phi^{b}$ by

$$
\phi^{b}(w)=\operatorname{SH}\left(w^{b}\right) .
$$

For $n \geq 4$, there are Shapley values that are not summary values, and there are summary values that are not Shapley values.

## Summary Values

Given a partition game $w$, define a summary coalition game $w^{b}$ by

$$
w^{b}(S)=\sum_{P \in \mathcal{P}(N \backslash S)} b(\|P\|) w(S ; P)
$$

where

$$
b(\varnothing)=1 .
$$

Define the summary value $\phi^{b}$ by

$$
\phi^{b}(w)=\operatorname{SH}\left(w^{b}\right) .
$$

For $n \geq 4$, there are Shapley values that are not summary values, and there are summary values that are not Shapley values.

## Theorem

A summary value $\phi^{b}$ is a Shapley value on n-player games if and only if

$$
b_{n}(p)=\sum_{r \in p} b_{n}(p \backslash\{r\} \cup\{r+1\})
$$

for all $p \in \mathcal{P}^{*}(n-2)$.

## Third Characterization

Given a partition game $w$, define a summary coalition game $w^{b}$ by

$$
w^{b}(S)=\sum_{P \in \mathcal{P}(N \backslash S)} b(\|P\|) w(S ; P)
$$

where

$$
b(\varnothing)=1 .
$$

Define the summary value $\phi^{b}$ by

$$
\phi^{b}(w)=\operatorname{SH}\left(w^{b}\right) .
$$

## Theorem

Suppose $\phi$ is a value on a convex cone $\Gamma$ containing dummy games, having a nonempty interior, and closed with respect to dummy extension. A value $\phi$ is efficient, symmetric, linear, monotone, and dummy independent on $\Gamma$ if and only if $\phi$ is a summary value with nonnegative parameters that are identical for all $n$ and satisfy

$$
b(p)=\sum_{r \in p} b(p \backslash\{r\} \cup\{r+1\})
$$

for all natural number partitions $p$.
